Linear Regression Lesson

Overview

This lesson gives students insight into applying linear regression
within the data science space.

Students will be working with the Iris dataset. Within machine learning,
this is a classic dataset, and used extensively in examples online.

Getting Started

Make sure the `linear_regression` folder is on your Desktop!

Open your Terminal. Type `cd linear_regression`.

Once you're in the working directory, type `jupyter notebook`. Jupyter
is an interactive environment, which allows you to run your code in different cells in a single
notebook.

Click on the `linear_regression_lesson.ipynb` file. All of the instructions are within the file.
